UV LED SMD Type
SPECIFICATION
Model: NS400L-4SFH

Nitride Semiconductors Co., Ltd.
1. Name: UV LED LAMP  SMD Type

2. Model: NS400L-4SFH

3. Absolute maximum ratings

<td>(L)×0.5</td>
</tr>
</tbody>
</table>

*(U): Upper standard level, (L): Lower standard level
8. Cautions

(1) The LEDs emit very strong UV radiation. Do not look directly at the LEDs. UV radiation can harm your eyes. To prevent inadequate exposure of UV radiation, wear UV protective glasses.

(2) The LEDs are very sensitive to static and surge. Take a full protection against static and surge.

(3) The powered LEDs generate heat. Heat dissipation should be considered in the application design to avoid the environmental conditions for operation in excess of the absolute maximum ratings.

(4) The LEDs should be kept at 30°C or less and 60%RH or less and the LEDs should be soldered within 7 days after opening the package. If unused LEDs remain, they should be stored in moisture proof packages, such as sealed containers with packages of moisture absorbent material (silica gel).

(5) The LEDs can be soldered in place using the reflow soldering method. Nitride Semiconductors Co., Ltd. cannot make a guarantee on the LEDs after they have been assembled using the dip soldering method. Please refer to the followings about the recommended soldering conditions.

- **Temperature profile**
  - Max. 260°C for 10 sec.
  - 220°C for 60 sec.
  - Pre-heat: 80°C and 200°C for 120 sec.
  - Heating rate: 2~5°C/sec.

- **Recommended soldering pad design**

  ![Soldering Pad Design](image)

  - Unit: mm

The encapsulated material of the LEDs is silicone. Therefore, the LEDs have a soft surface on the top of package. The pressure to the top surface will be influence to the reliability of the LEDs. Precautions should be taken to avoid the strong pressure on the encapsulated part. So when using the chip mounter, the picking up nozzle that does not affect the silicone resin should be used.

Repairing should not be done after the LEDs have been soldered.
Reflow soldering should not be done more than two times.
When soldering, do not put stress on the LEDs during heating.
After soldering, do not warp the circuit board.

(6) Do not clean the LEDs by the organic solvent. The organic solvent like acetone attached the surface of the LEDs may damage the package and the reliability of resin.
Do not also clean the LEDs by the ultrasonic.

(7) The LEDs are intended to be used for ordinary electronics equipment. Do not use the LEDs for the applications that may require a higher reliability and security and that the failure or
malfunction of the LEDs may threat to life.

(8) Do not reverse engineering by disassembling or analysis of the LEDs without our consent. If there’s any defectives found, please contact our sales division.

9. Warranty

(1) The warranty is valid for UV LED lamps only.
(2) Perform an acceptance inspection on arrival of the goods. Return the defectives if any stipulating the disqualification and quantity.
(3) Embedding the LEDs into the application and the verification of life and other qualities in practical use shall be executed by user.
(4) Do not use the LEDs for the applications that require the higher reliability and security and that may endanger life and health by the breakdown and the malfunction. Seller shall not bear any responsibility or liability with respect to any claims and damages caused by user’s usage of the LEDs without following our intended purpose or any written consent.
(5) Seller shall not bear responsibility for any damages or defects caused by improper operation at the current in excess of the absolute maximum ratings that are not covered by warranty.

10. Miscellaneous

(1) The electrode and the leads are gold plated. They may be changed in quality by exposing to the air contains corrosive gas. Be careful with the storage environment. The LEDs in the sealed bag can be stored for maximum 6 months. For the storage more than 6 months up to 1 year, the LEDs should be stored in the suitable environment of the stable temperature and humidity.
(2) The technical information in this specification is not to guarantee the intellectual property rights of seller’s nor a third party and not to grant the license.
(3) The appearance and specifications are subject to change for improvement without prior notice.
Optical and electrical characteristics

- Forward voltage vs. Forward current
